Detailed Answer Key Problem 1 : Graph the ordered pair (2, 3). Solution : The first value of the ordered pair is always corresponding to x axis and the second to y axis. Since, the first value 2 is positive, we have to start from the origin and move 2 units to the right. Since, the second value 3 is positive, now move 3 units to the up. Then, we have Problem 2 : Graph the ordered pair (1, -2). Solution : The first value of the ordered pair is always corresponding to x axis and the second to y axis. Since, the first value 1 is positive, we have to start from the origin and move 1 unit to the right. Since, the second value -2 is negative, now move 2 units to the down. Then, we have Problem 3 : Graph the ordered pair (-4, 3). Solution : The first value of the ordered pair is always corresponding to x axis and the second to y axis. Since, the first value -4 is negative, we have to start from the origin and move 4 units to the left. Since, the second value 3 is positive, now move 3 units to the up. Then, we have Problem 4 : Graph the ordered pair (-3, -4). Solution : The first value of the ordered pair is always corresponding to x axis and the second to y axis. Since, the first value -3 is negative, we have to start from the origin and move 3 units to the left. Since, the second value -4 is negative, now move 4 units to the down. Then, we have Apart from the stuff given above, if you need any other stuff in math, please use our google custom search here.
